

Rayonier's Performance Fibers Mill in Fernandina Beach, Fla.

Value From The Ground Up™

Rayonier's performance fibers are in high demand around the globe. They are all produced in two facilities in the Southeast U.S. Our Jesup, Ga., mill, which houses three fiber lines, and our Fernandina Beach, Fla., mill produce a combined total production of approximately 745,000 metric tons of high-value cellulose specialties and absorbent materials annually.

Jesup produces approximately 330,000 metric tons of high-purity cellulose specialties and 260,000 metric tons of absorbent materials each year. Our Fernandina Beach Mill exclusively produces high-value cellulose specialties fibers at a rate of approximately 155,000 metric tons per year.

To efficiently distribute our products as well as to receive raw materials, the facility utilizes on-site access to two major railways and is located near I-95 and regional deep water ports.

Key Facts

- **Employees**
Approximately 280
- **Products**
High-purity cellulose specialties
- **Annual Capacity**
155,000 MT

Our high-purity cellulose specialties are found in:

Digital Display Screens
